## 1. Introduction

The Walton Centre NHS Foundation Trust is one of the country's leading specialist centres for neurology and is the only dedicated neuroscience hospital trust in the UK; specialising in neurology, neurosurgery and pain services. Although the majority of patients come from Merseyside, Cheshire, North Wales, Lancashire and the Isle of Man, for some specialist treatments of complex disorders we see patients from all parts of the country, referred by their GPs or other neurologists, neurosurgeons and pain clinicians.

This year the Walton Centre has been confirmed as one of 13 new NHS Vanguards, along with some of the country's best known hospitals such as Moorfields, the Royal Marsden and the Christie. This means the Trust will be one of a select group leading national moves to increase collaboration between hospitals, GPs and community services and improve the quality of care for patients across the country.

As well as taking every step to ensure the best possible patient care the Trust is committed to creating an environment where all employees are equally valued and respected, with equal access to all employment opportunities.

This report collates and analyses the equality profile of all staff employed by the Walton Centre between 1 January 2015 and 31 December 2015. The majority of the data has been drawn from the Electronic Staff Records (ESR) system with some data also being taken from internal databases used for recording training and HR processes. Comparisons have been drawn from the previous year's reports to illustrate any changes and where progress has been made.

The Trust uses this data, alongside internal assessments, to ensure that policies, procedures, practices and organisational culture do not unfairly discriminate against staff based on their protected characteristics. This information is also used to shape the Trust's equality and diversity action plan to improve future outcomes for both staff and patients.

## 2. Workforce Composition

As of the 31 December 2015 the Walton Centre employed 1334 staff members, an increase of 82 since 2014.

The following subsections break down the workforce by each of the protected characteristics recorded in ESR. A copy of the full data is provided in the Appendices (page 21). Where possible, comparisons have been drawn to the local Liverpool population as reported in the 2011 Census to consider alignment to local demographics.

### 2.1. Age

Analysis of Overall Workforce

Numbers remain fairly evenly spread between all age groups from 26 through to 55 .
Workforce by Age

Age Group
The numbers of employees within age groups 26-30 and 36-40 have increased the most over the past 12 months by 22 and 37 employees respectively. There has also been an increase of 14 employees in the 51-55 age group. This increase has resulted in this age bracket now representing the highest number of employees (194).

The number of employees aged 30 or under remains constant ( $20.61 \%$ in 2014 and $20.46 \%$ in 2015); this remains below the $26.8 \%$ reported as between 15 and 29 within the local population (Census, 2011). This lower percentage will be in part due to the level of qualifications required for most posts within the Trust (this can be seen in the breakdown of age by staff group in the Appendix). Despite the further slight decrease in the number of employees aged 20 and under to $0.45 \%$ ( $1.0 \%$ in 2013; $0.88 \%$ in 2014) the Trust is continuing to promote several programmes to encourage employment of younger age groups, including apprenticeships and collaboration, mentorship and facilitation of an 8 week internship programme with a local school. However, further exploration of the reasons why employees aged 20 and under are leaving may help address this continued decrease.

The number of employees aged 46 and above also remains consistent from last year ( $40.58 \%$ in 2014 and $40.08 \%$ in 2015). This remains well above the $23.8 \%$ reported as between 45 and 64 years in the local population (Census, 2011). As has been noted previously, it is expected that the number of staff within this age bracket will continue to increase as a result of pension changes, economic changes and the ageing nature of the population generally. The Trust is continuing to provide support for this age group e.g. providing annual 'Planning for your Retirement' sessions and updating the Flexible Retirement Policy.

## Analysis by Staff Group

Analysis by staff group shows that $25 \%$ (107) of Registered Nurses are aged 51 or above, this compares to $24 \%$ (99) last year. In comparison, $26 \%$ (111) are aged 30 or under compared to $27 \%$ (111) last year. The highest individual age group remains 26 to 30 years, in part reflecting the continued recruitment of newly trained nurses.

Age 26 to 30 also represents the highest proportion of Allied Health Professionals (AHP's). Age 51-55 represents the highest proportion of staff for Additional Clinical Services, Admin \& Clerical and Estates \& Ancillary. Similar to Registered Nurses, $26.9 \%$ of Medical and Dental staff are aged 51 or above, this is another increase from $25 \%$ last year and $22.8 \%$ in 2013.

Staff Group by Age

No analysis has been done between age and salary or age and senior managers/directors since these relationships will always be highly skewed due to the incremental progression within bands and the nature of career pathways.

The Staff Survey results show that $1 \%$ of respondents felt that they had been discriminated against because of their age; this remains consistent with last year's results but is below the average for acute specialist Trusts. It is unknown whether this discrimination is from patients, visitors or colleagues.

### 2.2. Sex

## Analysis of Overall Workforce

Females continue to make up the majority of the workforce at $79.9 \%$. This remains unchanged from last year (79.2\%) and the previous year (79.5\%). This is not consistent with the local population where approximately $50.6 \%$ are female (Census, 2011). However, this is similar to the NHS demographics reported by NHS

Employers (2014) which state that females make up $77 \%$ of the national workforce.

## Analysis by Staff Group

Despite their high prevalence across the workforce females only account for 29.4\% of the medical workforce. However, this is a notable increase from $25 \%$ in 2014, and a continued increase from $23 \%$ in 2013 and $17.6 \%$ in 2012. This figure is still below the $45 \%$ reported by NHS Employers (2014) although it must be taken into account that this figure also included Dental staff and GP's.

The breakdown of senior managers (Bands 8a and above) remains broadly consistent from 2014 and mirrors that of the workforce as a whole with $79.4 \%$ being female ( $77.9 \%$ in 2014) and only $20.6 \%$ male ( $22.1 \%$ ). However, this changes at

Director level (including non-executive Directors) where only $35.7 \%$ are female ( 5 individuals) and $64.3 \%$ are male ( 9 individuals). This remains unchanged from 2014.

Staff Group by Sex

Aside from medical and dental, females represent a higher proportion within all staff groups. This is a slight change from last year when Estates and Ancillary were 100\% male; however this is due to the re-categorising of the Supplies and Procurement department which has resulted in the number of females increasing from 0 to 7.

Analysis shows that the most significant split between males and females remains within Registered Nurses where almost $92 \%$ are female, this is unchanged since 2014. This is followed by Additional Clinical Services and AHP's where $86 \%$ are female.

## Analysis of Average Salary

The average salary for females is now higher than the average salary for males for Additional Scientific and Technical and Additional Clinical Services staff groups. However, for all other staff groups the average salary of males is more than the average for females. This is compared to last year when Healthcare Scientists were the only staff group in which females earned more on average. These figures will be affected by the lower number of males in most groups however, this remains on the face of it a slightly concerning finding and further analysis is still needed.

The Staff Survey results show that $1 \%$ of respondents reported feeling they had been discriminated against because of their sex; this is an decrease from $3 \%$ last year and is in line with the average for acute specialist Trusts. It is unknown whether this is from patients, visitors or colleagues.

### 2.3. Ethnicity

## Analysis of Overall Workforce

As at 31 December 2015, 89.9\% of the workforce identified themselves as White (including White British, White Irish and White Other); this is a slight decrease from $90.3 \%$ from last year. Although this figure is higher than the national NHS statistics it
is in line with the Liverpool population where $88.9 \%$ are estimated to be White British, Irish or Other (Census, 2011).

By comparison, $8.55 \%$ of the workforce identify themselves as Black and Minority Ethnic (BME). This is a continued increase from $8.15 \%$ last year. This does remain below that of the Liverpool population where $11.1 \%$ are reported to be BME (Census, 2011). 'Asian or Asian British - Indian' remains the highest within the BME groups, although this has reduced slightly to $4.2 \%$ from $4.31 \%$.
$1.57 \%$ of the workforce have chosen not to declare their ethnicity, this remains consistent with the $1.6 \%$ last year.

Workforce by Ethnicity

## Analysis by Staff Group

The highest proportion of BME staff remains within the medical workforce. At 41.2\%, this is a further increase from $38.8 \%$ last year, which was in turn an increase on the previous year. This continual increase reflects the difficulties in recruitment of specialist neurological medical staff and the consequential requirements to try to source staff from abroad. The increase may also in part reflect the near completion of a Trust wide data cleanse project.

Registered Nurses remain the second most diverse staff group with BME staff accounting for $10.4 \%$; this is a slight decrease from $10.7 \%$ but remains broadly consistent. Whilst this demographic is increasing in many NHS Trusts, due to increased overseas recruitment, this consistent figure reflects the fact that as yet the Walton Centre has not done so.

There have been small increases in the percentage of BME staff within Additional Prof Scientific and Technical, Additional Clinical Services and Admin and Clerical. However, within AHP's, Healthcare Scientists and Estates 100\% of staff are recorded as White (including White British, White Irish and White Other).

A further area of concern is that, despite the number of senior managers (Bands 8a and above) increasing by 11 over the last 12 months, there are still no BME staff. This is also true for Directors where 100\% are White British. This remains unchanged from last year and is an area undergoing further investigation as part of the Trust's WRES analysis and also part of the WRES action plan.

## Analysis of Average Salary

Analysis of average salary by ethnic origin shows that the average salary for employees identifying themselves as BME is higher than for employees identifying themselves as White for Admin and Clerical, Nursing and Medical staff. The average for Additional Scientific and Technical and Additional Clinical Services is higher for staff identifying themselves as White. However, care needs to be taken with this data as BME averages will be highly skewed by one high earner given the smaller numbers of BME staff within the workforce. A full pay audit would need to be carried out for conclusive results.

According to the Staff Survey results, the percentage of staff reporting that they had been discriminated against based on their ethnicity has increased by $1 \%$ to $3 \%$. This is in line with the average for acute specialist Trusts but again it is unclear of the origin of this discrimination.

### 2.4. Disability

## Analysis of Overall Workforce

The number of staff whose disability status is unknown has reduced for the fourth year to just under $30 \%$, having been a huge $73.4 \%$ in 2012. This is also likely to reflect the near completion of a Trust wide data cleanse project alongside promotion of the reasons why data needs to be collected. The number of employees choosing not to declare has also decreased again from $6.8 \%$ to $5.3 \%$.

However, the number of staff declaring a disability has decreased slightly. At 3.3\% this remains below the estimates given for the local working age population (16-64 years) where $17.9 \%$ identify themslves as having a limiting long-term illness or disability (Census, 2011).

Workforce by Disability

However, in the most recent Staff Survey (2014) 17\% of the respondents classed themselves as having a disability which suggests continued under-reporting at Trust level, this is a further increase from $15 \%$ reported in the previous results. The Staff Survey also shows that $1 \%$ of respondents reported feeling that they had been discriminated against because of a disability; this is an increase from 0\% last year. However, the origin of the discrimination is unknown.

Positively, the Staff Survey results show that $86 \%$ of employees who answered yes to having a long-standing illness, health problem or disability felt that the Trust has made adequate adjustment(s) to enable them to carry out their work. This is a huge increase from $63 \%$ and is well above the average for acute specialist Trusts at $74 \%$. An individual tailored reasonable adjustment template has just been launched by the Trust to further support staff with disabilities. This will be used by managers and employees when agreeing reasonable adjustments so that both parties have an accurate record of what has been agreed. It will also provide an opportunity for discussion in terms of how the employee's long term condition may affect them in work and what steps should be taken should the employee become ill at work or need to be off sick. Managers will be asked to return these to the HR team which should hopefully allow some central capture of reasonable adjustments made within the Trust.

## Analysis by Staff Group

Analysis by staff group shows that the highest number of staff who have declared that they have a disability are within Admin and Clerical (13), Nursing (12) and Additional Clinical Services (10). There are still no employees within Healthcare Scientists who have declared that they have a disability however, this has changed for Estates and Medical staff since last year.

Undefined, although reduced, remains highest for Nursing (37\%) and lowest for Medical staff (19\%), however not declared is highest within the Medical workforce (14.3\%), although this has also reduced since last year.

## Analysis of Average Salary

Analysis of average salary shows that employees who have declared they do have a disability on average, earn less than those who have said they do not, or for whom it is unknown. However, this could reflect the level of job carried out or the number of hours worked, which is often less as a form of adjustment. Further analysis will take place to review pay discrepancies as per the Trust's current equality objectives.

Only one of the senior managers (Bands 8a and above), and none of the Directors, are listed as having a disability; however 45 senior managers and 5 Directors do remain unknown or have chosen not to disclose.

### 2.5. Religion or Belief

## Analysis of Overall Workforce

Christianity remains the most prevalent religion/belief at 60.9\%, a continued increase from $56.4 \%$ last year and $49.3 \%$ in 2013. However, this is still lower than the demographic figure for Liverpool of $71 \%$ (Census 2011). This continued increase is again likely to be due to the near completion of a Trust wide data cleanse project which has seen a continued decrease in unknown and not declared, from $13.8 \%$ to $10.4 \%$ (originally $27.3 \%$ in 2012 ) and $11.7 \%$ to $10.4 \%$ respectively.

Workforce by Religion or Belief

## Analysis by Staff Group \& Average Salary

There does not appear to be any particular pattern with regard to religion or belief across different staff groups, including senior managers and Directors, or across average salaries.

In the most recent Staff Survey 1\% of respondents reported feeling that they had been discriminated against because of their religion or belief, this is an increase from $0 \%$ last year. Again this could be from patients, visitors or colleagues but no concerns have been reported to HR.

### 2.6. Sexual Orientation

## Analysis of Overall Workforce

The percentage of the workforce identifying themselves as heterosexual has increased again to $76.5 \%$ ( $72.9 \%$ in 2014 and $64.2 \%$ in 2013). The number of employees identifying themselves as gay and lesbian has also increased, whilst bisexual has remained consistent. These increases are again likely to be due to the data cleanse project as the number of employees not wishing to declare, and the number recorded as unknown, have further decreased.

Although there is limited information available for the local Lesbian, Gay and Bisexual (LGB) population the Government has estimated that 5-7\% of the National population identify as LGB. Based on this figure, despite the small increases described above, the Trust is underrepresented in relation to LGB. However, it is difficult to draw meaningful conclusions without accurate data for the local community.

Workforce by Sexual Orientation

Sexual Orientation
■ 2015 Total ■ 2014 Total

## Analysis by Staff Group

Analysis by staff group remains consistent with last year. All sexual orientations are represented within Nursing, Additional Clinical Services, Additional Prof Scientific \& Technical and Admin \& Clerical areas. In comparison, there is very limited variation shown within Estates, Healthcare Scientists and Medical staff. For these areas, only heterosexual is recorded, although there are a number of 'undefined' and 'do not wish to disclose' which could be skewing this, particularly within Medical \& Dental. Senior managers and Directors also have fairly limited variation, although there has been a slight increase for senior managers in the last 12 months. Again, a large percentage has chosen either not disclose or not to report their sexual orientation ( $24.7 \%$ ) which could also skew this analysis.

## Analysis of Average Salary

There does not appear to be any obviously variation in average salary based on sexual orientation. However, due to the small number of reported LGB staff, this would need closer analysis to establish if there are any underlying concerns.

Despite the gaps in some areas the most recent Staff Survey shows that 1\% of respondents reported feeling that they had been discriminated against because of their sexual orientation, this is an increase from 0\% last year. Again this could be from patients, visitors or colleagues.

### 2.7. Gender Reassignment

The Trust does not currently collect data regarding gender reassignment due to the limitations on the storing of this data. It is hoped that the national system will be updated to allow the storing of this information in the future.

Although data cannot be recorded the Trust does provide support for trans staff; including information on all adverts placed on NHS jobs regarding alternative options for completion of DBS documentation, a Transgender Staff Support Policy and specific transgender awareness training sessions to increase understanding amongst staff. On the back of some of this work the Trust successfully achieved the Navajo charter mark this year (see Section 10).

### 2.8. Marital Status

There is minimal difference between the number of staff recorded as single and the number recorded as married. The number of staff for whom the Trust has no marital status recorded has decreased for the third year running (10.4\% in 2013 to $5.85 \%$ in 2015).

### 2.9. Pregnancy and Maternity

As of 31 December 2015 a total of 21 employees were recorded as being on maternity leave. This has varied from 35 down to 20 over the last 12 months, with an average of 27.5 employees off per month. As per NHS terms and conditions the Trust offers enhanced occupational maternity pay, paternity pay and adoption pay to all staff after a qualifying period of service.

Number of Staff on Maternity Leave

The Trust has updated the Maternity, Maternity Support (Paternity) and Adoption Policy this year in light of recent legislation changes and to make the process, pay entitlements and calculations clearer for staff. A separate Shared Parental Leave Policy has also been developed to clearly advise staff of their different options and the processes required should they wish to utilise this new entitlement. These new policies were communicated out to staff and training sessions have been offered to support managers.

## 3. Recruitment

The in-house recruitment team continues to use NHS jobs to advertise and recruit to vacancies. This system allows the Trust to capture monitoring information and also provides applicants with information about the Equality Act 2010, including protected characteristics and discrimination.

Although monitoring information is collected from applicants, recruiting managers are unable to see these details. Until shortlisting has taken place recruiting managers are also unable to view the individual's name and right to work status. The aim of this is to prevent managers not shortlisting an applicant because they may require a work permit, and thereby indirectly discriminate.

The Trust remains a Two Tick accredited employer, and therefore continues to guarantee an interview to all applicants who declare that they have a disability and who meet the essential criteria for the vacancy. This is demonstrated by the higher percentage of shortlisted/applied for staff declaring they have a disability (39.4\%) compared to those stating they do not have a disability ( $27.6 \%$ ). The percentage of staff with a disability going on to appointment (10\%) is however lower than for applicants stating they do not have a disability (22.7\%) or not disclosing (28\%). Whilst this looks poor on initial viewing the data will be skewed because of the guaranteed interview. This is because once at interview it becomes a level playing field and some of the other candidates shortlisted are likely to also have desirable
skills or experience which will benefit them in the interview, whereas individuals using the guaranteed interview scheme may not as they do not need to in order to be shortlisted.

Detailed data showing the breakdown of all applicants, shortlisted candidates and appointed applicants, between 1 January and 31 December 2015, by each of the protected characteristics recorded on NHS jobs, can be found in the Appendices. The system does not record gender reassignment or pregnancy and maternity.

General analysis shows that the majority of applications are from females (72.9\%), in line with national NHS figures. Females are very slightly more likely to be shortlisted than men, based on percentage shortlisted compared to applied (28.9\% and 26.0\%). However, men are just as likely to be appointed from shortlisting as females, based on the percentage appointed compared to shortlisted ( $22.1 \%$ and $22.3 \%$ ). Overall there is very little difference but females are $0.7 \%$ more likely to be appointed from application than males.

In relation to ethnic origin, the percentage applied to appointed is $8.4 \%$ for White applicants compared to $5.2 \%$ for BME. The percentage appointed from shortlisting however is broadly similar, at 27.5\% (White) and 26.3\% (BME). The lower percentage appears at the applied to shortlisted stage (29.8\% and 21.8\%) however, it is important to note that recruiting managers do not see personal details at this stage nor the individual's right to work status. One reason for this reduced percentage for BME applicants may be qualification level or registration status.

Analysis by age is limited to applied and shortlisting as the age groups used on NHS Jobs do not match those stored in ESR (where the appointed data is drawn from to make comparisons). Based on the data available those under 18 (50\%) and those over 70 ( $100 \%$ ) were most likely to be shortlisted from applied; however the small numbers will likely skew this. All other age groups were fairly consistent.

Analysis by religion or belief shows no significant discrepancies; the only anomaly being a higher percentage of applied to appointed for Buddhism, this is something that was also noted last year.

In terms of sexual orientation; gay, heterosexual and undisclosed are all consistent at around $6 \%$. Bisexual is slightly below this at $4.9 \%$ and Lesbian is much higher at $11.1 \%$. This is a change from last year where Lesbian had a lower percentage than other groups. Again, these figures will be affected by the small numbers and these details are unknown to the recruiting manager, unless the candidate should choose to inform them for any reason.

Finally, no concerning differences were noted in terms of marriage and civil partnership.

## 4. Promotions

Between 1 January and 31 December 2015, 127 employees have increased by one band or more. This could be due to either a promotion, acting up period or a rebanding exercise. This is a slight decrease of 147 last year but still remains much
higher than previous years (54 in 2013) and continues to reflect good development and growth of internal talent.

Of the 127 staff promoted $80.3 \%$ were female; this is an increase from $77.6 \%$ but is broadly in line with the overall demographics of the workforce. Of those promoted $7.9 \%$ were from a BME background. This is an increase from $3.4 \%$ last year and is broadly in line with the percentage of BME staff within the organisation as a whole. This is a positive finding in relation to progression of BME staff. It is worth pointing out that the data shows that there have been two White Greek members of staff who have received a promotion however the workforce demographics show only 1 individual. This will be because the demographics are a snapshot as at 31 December 2015 but the promotions are across the whole year. This would suggest 1 member of staff must have received a promotion but subsequently left.

The percentage of promoted staff recorded as having a disability was $9.45 \%$. This is significantly above the Trust workforce figure of $3.30 \%$ and a huge increase from $2.7 \%$ last year. Promotions by age show that 26-30 are most likely to be promoted and the number gradually decreases through the subsequent age groups, whilst this doesn't mirror the Trust demographic per se it is perhaps typical of career pathways. The figures for LGB are in line with the Trust demographics at 2.4\% of promotions; an increase from only $0.6 \%$ last year. Full analysis against can be found in the Appendices.

The most recent Staff Survey results show that $87 \%$ of respondents felt that the Trust provides equal opportunities for career progression or promotion. Unfortunately this has decreased slightly from $92 \%$ and is slightly below the specialist acute Trust average at $90 \%$. This response is lowest for Nursing and Healthcare Assistant at $70 \%$ which may be because of the limited career progression within this area, due to the nature of the role. These figures are consistent regardless of age but there is a discrepancy between people with a disability (83\%) and those without (89\%), as well as for men ( $93 \%$ ) and females ( $87 \%$ ). Both of these results contradict the actual promotion data where the proportion of people promoted in the last 12 months with a disability is well above the Trust demographics, and the number of females promoted is also slightly about the Trust demographics. However, this is the 2014 staff survey responses so these scores may have improved when we receive the 2015 data in February.

## 5. Training and Development

A total of 407 applications were made by non-medical staff for non-mandatory training courses between 1 January and 31 December 2015, a very slight increase from 401 last year. Of these, 344 were approved, 26 were declined and 34 were either not completed or the course was cancelled or fully booked.

There is an over-representation of females and an under-representation of males applying for training courses compared to the workforce demographics.

# Comparison of Training and Workforce Demographics by Sex 

This is also true for ethnic origin, where the percentage of White staff are overrepresented and BME staff are under-represented, compared to the overall workforce demographics. This is an area identified in the WRES and is being explored to try and determine why this may be. There does not appear to be any difference between approved and declined by ethnicity however, the percentage of BME staff whose application was not completed or the course was full / cancelled is much higher. This is something which should also be explored further.

## Comparison of Training and Workforce Demographics by Ethnicity

The percentages of applications by age group, sexual orientation and religion or belief are all comparable with the workforce demographics. The percentages by disability are also broadly in line with overall demographics, albeit with a slight underrepresentation for staff without a disability. Pleasing there are also no employees recorded as having a disability who fall into the application not completed or course
full / cancelled category, confirming there are no underlying issues in terms of completing documentation.

It is important to note that this year is the first year all protected characteristics, as recorded in ESR, have been able to be analysed. This is due to improvements in the data recorded by the Training \& Development Department. Further improvements are being made which will also allow analysis of PDR's in the future.

Analysis of medical training data has also been possible this year due to improved recording. A total of 455 applications were made, all of which were approved however, due to some gaps in recording, 83 of these cannot be analysed which has impacted on the accuracy of the conclusions which can be drawn as everything looks to be under-represented compared to medical workforce demographics as a whole. These have been recorded as 'data incomplete' in the raw data. Due to an error in the data, age has also not been reported.

## 6. Pay

The Trust uses the Agenda for Change job evaluation scheme to ensure that all jobs are banded fairly and equally. The Trust has implemented a new checking stage prior to advertisement to ensure that all jobs have been banded correctly. Further work is underway to compile a clear electronic database of all job descriptions which have been matched or evaluated as currently the majority is still in paper form.

The Agenda for Change pay scale sets out clear amounts for basic salary for all bands, including incremental progression in line with length of service. This process helps to ensure equal pay across all employees. Medical staff also have a system which aligns different role types with defined salaries and progression scales.

When a new employee, who has not worked in the NHS previously, commences with the Trust if their previous experience is relevant to the role they are applying for they could be placed on a higher point of the scale. The point they would be placed on would be no higher than the equivalent number of increment points to comparable years' experience. This must be determined by the HR Department and agreed with Finance prior to confirmation.

However, the Trust is aware that there are additional earnings (i.e. enhancements, overtime etc.) which although standardised could result in certain individuals earning more than others.

Last year the Trust reported that it was aiming to carry out a pay audit over the next 12 months to ensure there were no notable gaps. Unfortunately this has not yet happened due to limited resources, however, it is still part of the Trust equality action plan. The Trust is hoping to take a staged approach, beginning with an audit of male and female pay before extending the scope to the other protected characteristics. However, in the interim, analysis of average salary has been done by each of the workforce demographics discussed above.

## 7. Flexible Working

The profile for flexible working shows that $74.9 \%$ of employees work full time ( 37 hours per week or more) with $25.1 \%$ of staff working part time. This remains consistent with previous year's figures. Of this number $93 \%$ are female; this also remains unchanged from last year and is likely to reflect the fact that females are more likely to be carers and/or have primary responsibility for childcare, therefore requiring more flexible working arrangements to support this. The percentage of employees working part time is highest within Additional Clinical Services, Estates and Ancillary and AHP's.

Part Time Staff by Sex and Staff Group

In reality the level of flexible working is probably much higher within the Trust as it is known, but unrecorded, that a large number of staff work compressed hours.

## 8. Employee Relations

The Trust monitors the protected characteristics (as recorded on ESR) for all individuals involved in disciplinaries, grievances, bullying and harassment and capability cases. Between 1 January 2015 and 31 December 2015 there were a total of 21 cases, this compares to 27 cases last year and 31 the previous year.

Due to the small number, cases have been grouped together to avoid identification of individuals, some demographics have also had to be grouped together for the same reason. Those recorded as "N/A" are where there has been a group case. Although it is difficult to look for patterns due to the small number of cases there do not appear to be any alarming findings. There is a slightly higher proportion of BME staff compared to the workforce demographics ( $9.52 \%$ compared to $8.55 \%$ ), there is also a higher percentage of individuals with a disability compared to the workforce statistics and finally a higher proportion of males compared to the percentage within the workforce, which has continued for the second year. However, a review of the cases has confirmed that all were necessary and appropriate, or raised by the individual themselves. Therefore, there is no concern of detrimental treatment at this
time. However, the HR Department will continue to monitor these statistics going forward to ensure that this is not a continued theme. Full data can be found in the Appendices.

## 9. Staff Survey Results

The findings from the annual staff survey are broken down by different demographic groups including: age, sex, disability and ethnic background. The full findings can be found in the appendices however some differences to note include:

- Age - Staff aged 16-30 were 8\% more likely to report that they had received job-relevant training, learning or development in last 12 months. Staff aged 31-40 were much more likely to report having had a well-structured appraisal at $60 \%$ compared to an average of $38.6 \%$. However, $43 \%$ of staff aged 51+ reported that they had suffered work-related stress in last 12 months; this is considerably higher than for other ages for the second year.
- Ethnic Origin - BME staff are $15 \%$ more likely to report that they received job related training, learning or development in the last 12 months and are nearly $30 \%$ more likely to feel they have had a well-structured appraisal in the last 12 months. This is a similar finding to previous year's results. BME staff are also less likely to feel that they have suffered work related stress. However, the percentage of BME staff reporting that they have experienced discrimination at work in the last 12 months is still higher than for White staff (15\% compared to $9 \%$ ) although this has decreased from previous results. Despite this there is no difference in terms of experiencing bulling or harassment, or in belief regarding the Trust providing equal opportunities for career progression or promotion. This area will be explored further with the BME Network group, following analysis of the WRES.
- Disability - Staff with a disability were nearly $10 \%$ more likely to report that they felt satisfied with the quality of work and patient care they were able to deliver however, were much less likely to feel that they were able to contribute towards improvements at work ( $51 \%$ compared to $76 \%$ ). Staff with a disability were also more likely to report that they had felt under pressure to attend work when feeling unwell. It is hoped that the launch of the Tailored Reasonable Adjustment Template will help to reduce this as it will provide a clear agreement of arrangements in place to support individuals with a disability, where this has been declared. Perhaps on a similar note, staff with a disability are also over $10 \%$ more likely to report having experienced work related stress within the last 12 months. This is a theme which has continued from last year's results and requires further investigation. Finally, there are also increased scores for experiencing physical violence from patients, relatives or the public in last 12 months for staff with a disability. Whilst this wasn't something noted last year further investigation into a few of these issues is recommenced.

## 10. Progress \& Achievements

- Successfully awarded the Navajo Charter Mark following a rigorous assessment process. This is an equality mark sponsored by In-Trust Merseyside \& Sefton Embrace and supported by the LGBTI Community networks across Merseyside. It is a signifier of good practice, commitment and knowledge of the specific needs, issues and barriers facing lesbian, gay, bisexual, and transgender (LGBT) people in Merseyside. Navajo looks at employment practices and how services are inclusive for LGBTI people. The assessment looked at the following 5 areas:
- Practices and Policies
- Training
- Staff Recruitment and Engagement
- Monitoring
- Service Users \& LGBT Engagement
- Establishment of BME Network group, following analysis of WRES data and the need for a deeper understanding of the results. The first meeting is due to take place in March 2016 which is a major achievement as the Trust has previously been unable to set up sustainable staff networks.
- The Walton Centre has been named as one of the best places to work in the Health Service Journal's Best Places to Work 2015 Awards. The Trust was named as runner-up in the specialist Trust category - one of five categories in the prestigious awards event, putting the Walton Centre in the top ten of NHS employers nationally. The recognition is based on the results of the NHS Staff Survey and is a huge accolade and a fantastic reflection on our staff and the Walton Centre as a place to work.
- A lecture by the founder of the Mary Seacole Centre for Nursing Practice, an international speaker, Professor Elizabeth Anionwu, took place in April. The talk explored the life of the legendary Crimean War nursing heroine Mary Seacole, and the importance of diversity within the profession and wider NHS.
- The Trust has been identified as one of only twelve exemplar Trusts across the country (the only Trust in the North West) in the area of health and wellbeing. As a result the Trust has been awarded non recurrent funding and support to improve the health and wellbeing of our staff, an initiative identified by Simon Stevens as one of his key priorities for the NHS during 2016.
- A number of new health and wellbeing initiatives have already taken place over the last 12 months:
- Launch of discounted massage therapy for staff
- A free six week weight management course giving practical advice on healthy eating, recipes and dealing with temptation
- Introduction of yoga classes
- Fruit and veg stall and van visiting the site 3 times a week
- Further Health \& Wellbeing days with various support and discounts
- Lunchtime sessions looking at reducing stress and increasing resilience
- Launch of revised equality impact assessment form.
- The Trust has run a number of Berwick Sessions with staff over the past 12 months. The aim of which has been to bring our Quality and Patient Safety Strategy to life, covering a number of topics. As well as continuing to host staff listening weeks throughout the year.
- In June 2015 the Trust hosted its fourth annual open afternoon which was another huge success with record attendance at the careers lectures and various stalls and activities.
- In addition to the annual staff survey, staff friends and family tests have continued to take place on a quarterly basis. The results have continued to be extremely positive; at Q4 $98.7 \%$ of staff reported being extremely likely or likely to recommend the Trust to friends and family if they needed care or treatment ( $79.2 \%$ reporting extremely likely) and $80.5 \%$ of staff said they were extremely likely or likely to recommend the Trust as a place to work.

## 11. Next Steps

- Roll out training to support managers in completing the new equality impact assessment form and ensure this is embedded in all necessary processes.
- Plans to make equality training mandatory for all staff on a three yearly basis.
- Investigate why employment of 16-25 year olds continues to decrease.
- Investigate work related stress, particularly for those over 50.
- Carry out equal pay audits by protected characteristic, starting with sex.
- Explore further initiatives to increase the percentage of BME staff at bands 8a and above.
- Investigate possible causes of staff with a disability reporting higher levels of work related stress and pressure to attend work when unwell.
- Investigate what the causes were for number of application not being completed or the course was full / cancelled for BME staff to ensure this higher figure is not due to any disadvantage.
