

## The study flowchart – participant involvement

**Study stage 1 complete. We held interviews & focus groups with women with epilepsy, their partners and family to help develop the Delphi survey**

**Delphi Survey – recruitment closed 31-05-2022**  
**Participants included expert patients, health professionals and representatives of organisations supporting women with epilepsy.**

**Round 1 complete** → **The survey questioned what items of care are most important when preparing for pregnancy with epilepsy.**

**Round 2 complete** → **Expert patients, health professionals and Voluntary organisation representatives rated the importance items of preconception care.**

**Survey completes with the voluntary option participate in the consensus meeting** → **A representative sample of patient, professional, and voluntary organisation stakeholders will review the study results.**

**Final stage Consensus meeting** → **Expert patients will join other experts to help agree the important stages of the preconception care pathway.**

**End of study. Voluntary Option to be kept up to date of the results, about future research** → **We will publish the results and plan for future research. If you give permission we will keep you updated.**
